CESI Internal Report

Water Survey of Canada

2021-08-13

Canadian Environmental Sustainability Indicators

Every other year, the Water Survey of Canada produces the Canadian Environmental Sustainability Indicators (CESI) that assess water quantity across Canada. As of 2021, there were over 2100 active stations collecting flow data in the hydrometric network, with most stations reporting real-time data. This document provides supplementary information about the indicator values for internal reference.

Supplementary Station Information

When CESI indicators are calculated, stations are removed from the analysis based on the historical flow data record, as well as the completeness of data for the current year. Flow values from the year of analysis are compared against a normal period of 1981-01-01 to 2010-12-31 (or 1981-01-01 to 2010-12-31 for Northern Quebec stations) in order to evaluate whether each daily value falls within the range of normal values for that date.

Stations are not used for the indicators if:

- there are less than 25 years of data within the 30 year normal period (for each day of the year),
- the number of days for the current year is less than 174 days for seasonal stations (of approximately 217 days overall),
- or the number of days for the current year is less than 292 for continuous stations (of 365 or 356 days).

Annual reporting station summary:

- 1. Year: 2004
- 2. Number of stations with flow data for analysis year: 1857
- 3. Percent of stations' dates with enough years in the normal period: 84.73
- 4. Number of stations with enough data in the normal period: 1480
- 5. Number of seasonal stations with at least 174 of 217 days: 400
- 6. Number of continuous stations with at least 292 of 365/6 days: 969
- 7. Final number of stations used for calculation of the indicators: 1369

HYDAT database version date: 2021-07

Local Water Quantity Indicator

CESI Local Water Quantity Indicator (2004)

Downstream Stations Summary for 2004

- (1) Pearse Drainage Area (PDA)
- (2) Flow type in 2004
- (3) PDA total drainage area (m³)
- (4) Proportion of area gauged by all classes (Low, Normal, High)
- (5) Number of downstream stations classified as "Low" for PDA
- (6) Proportion of area in PDA gauged by "Low" stations
- (7) Number of downstream stations classified as "Normal" for PDA
- (8) Proportion of area in PDA gauged by "Normal" stations
- (9) Number of downstream stations classified as "High" for PDA
- (10) Proportion of area in PDA gauged by "High" stations

National Water Quantity Indicator

2004 Station Classifications

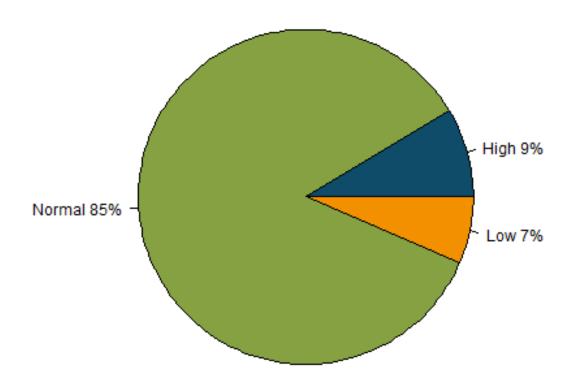

Figure 3: Overall classifications for all hydrometric stations in Canada in analysis year

Appendix 1

This is the list of hydrometric stations that collected flow data in the year of analysis, and were included in the calculations of the local, regional, and national CESI indicators. The stations are grouped in the 25 Pearse Drainage Areas of Canada.

(1) Pacific Coastal drainage area
